BOOKS

- 1) Newman, W. E., *Data Visualization for Designers: Applied Mapping*, published July 2017. The book teaches methods for making maps starting from theories of mapmaking to examples of data visualization used across multiple disciplines. Mapping structures complex relationships between representation and thinking. Samples available on the website:

- <http://appliedmapping.fiu.edu>
- 2) Newman, W. E., *Imaginative Beholding: Representation, Modernism and Aesthetics in Visual Culture*, under consideration with University of Pittsburgh Press. The book asks why art becomes modern at the turn of the nineteenth century. The book posits that it is the emerging discipline of psychology in Germany that impelled the emergence of new models of mind and constructed the modern subject. Book received funding through the Graham Foundation Grant (\$6,000). Proposal pending with publisher.
 - 3) Newman, W. E. and S. Vassigh. *Engineering Aesthetics*, under contract with Routledge. Funded through Cejas Family Foundation Research Award, 2012-2013 and 2013-2014. The book addresses the history of technology in the building sciences in light of the history of the theory of structures in the 19th century in relation to the types of structures developed in the 20th century. The book includes basic engineering analysis and structural diagrams in an interactive DVD to augment written examples.

PATENT DISCLOSURES, APPLICATIONS, AND AWARDS

In-Progress

2019: Currently in collaboration with Dr. K. Maitra, Professor and Chair in Occupational Therapy at the College of Nursing & Health Sciences at FIU, to develop patents for medical devices for use in therapeutic environment for patients with neurological disorders. Part of our study is linked to a co-taught course offered as ARC 5933 Industrial Design Applications (Arch) and OTH 5922L, Integrative Master Seminar II (OTH). Student teams of architecture and occupational therapy graduate students lead by Dr. Newman and Dr. Maitra modify existing assistive devices and propose new devices for user groups. Devices with significant potential will be further developed with the goal to submit patent applications.
